

# Crystal Luna-Anderson RN, BSN, CWON, CFCN

Director of Clinical Services  
Medline Industries, Inc.

Crystal Luna-Anderson is the Director of Clinical Services and part of an innovative team at Medline, Post Acute Care Skin Health. She has recently transitioned from the post- acute care hospital environment in an effort to extend her reach to those who make a difference; the clinicians, who serve the thousands patients in numerous care settings every day.

Crystal, believes empowering nurses to be part of a transformational and holistic approach is crucial to the state of healthcare, specifically skin health; which has a significant impact in patient's and caregiver's lives. She is driven by one of the most powerful elements of the human experience - caring. Crystal at every opportunity will tell clinicians, "take the time, even if for one small moment, you could be the only clinician to ever touch that patient and change the trajectory of their care."

Crystal began her career as a critical nurse and it was apparent to her that skin health received a lack of attention. She quickly learned, that each and every patient's condition had an impact on the integrity of the skin. She developed a keen insight from treating patients diagnosed with multisystem organ failure who experienced complex pressure injuries, or the emergent surgical patient who was being treated for a large open surgical sites.

She hopes to continue to help leaders of healthcare institutions understand the value of educational partnerships in an effort to provide progressive, efficient and effective healthcare. She believes the innovative tools Medline has created and will continue to create, will have a definitive added value that sets them apart from the competition.

Crystal is a Registered Nurse, Certified Wound, Ostomy Nurse and a Certified Foot Care Nurse. She recently co-authored an article Pressure Injuries in the Pediatric Population: A National Pressure Ulcer Advisory Panel White Paper, September 2019.

Crystal holds a Bachelorette of Science in Nursing from the University of Texas Health Science Center in San Antonio
